ABSTRACT

This program gives young students a good look at the process of investigation to help them develop the ability to ask scientific questions, investigate the science-filled world around them, and use those observations to build knowledgeable explanations for the questions they pose as an exciting way to help students develop their understanding of science. A fun, hands-on activity is included to further demonstrate these concepts. This title correlates to the National Science Education Standards for Science as Inquiry--the necessary ability to understand and do scientific inquiry. A teacher's guide is included. (YDS)
